

STC-Europe connection for Parrot Car Kits

Parrot adapter cables are replaced by new adapter cables from STC-Europe to improve sound & operating quality of all Parrot units.

Key benefits:

- The Parrot unit is connected directly into the vehicle harness and CAN-Bus and enabling volume adjustments via SRC (steering wheel remote control).
- Phone calls are routed directly through Phone -in of a factory fitted audio/navigation system (utilizing mute).
- No Ignibox needed for fitment anymore.
- In case of using the music player function of the Parrot the Audio signals are fed directly via AUX-in, which gives a drastic improvement of sound reception over the Parrot loom.
- In case of using a factory fitted navigation system the routing commands mute the Parrot signals.
- The entire set up works in the same way like a factory fitted car kit.
